PROFILE

Applied Microeconomist specializing in labor economics, development economics, economic policy, and spatial analyis. My research examines how labor-market institutions, production technologies, and gendered classifications of work shape women's access to jobs and allocation across occupations and industries. Current and planned work connects rigorous empirical analysis to policy design for gender equality, productive employment, workplace regulation, technology, and women's economic opportunity.

EDUCATION

Clark University, MA, United States

Ph.D. Economics	Expected May 2027
M.A. Economics	2023

Mykolas Romeris University, Vilnius, Lithuania

Erasmus+ Certificate Program in Economics and Business	2019

University of Ghana, Legon-Accra

M.Phil. Economics	2019
B.A. Economics and Mathematics	2016

SELECTED RESEARCH IN PROGRESS

Research focus: How laws, technologies, production structures, and institutional classifications affect women's entry into, allocation across, and continued employment within traditionally male-dominated sectors. Emphasis on policy design, labor demand, gender equality, and heterogeneous effects across workers, industries, occupations, and local labor markets.

1. **Did Protective Labor Laws for Women Reduce Female Employment? Evidence from Maximum-Hours Laws and Weight-Lifting Regulations** | ***Job-Market Paper***

- Build a long-run state-by-decade research design linking women-specific labor-law histories to harmonized IPUMS U.S. census microdata from 1860–1960, extending prior evidence beyond a single 1920 cross-section.
- Estimate two-way high-dimensional fixed-effects models and modern staggered difference-in-differences estimators, including Callaway & Sant'Anna (2021) and Wooldridge (2021) pairwise comparisons, to estimate dynamic, cohort-specific, and heterogeneous treatment effects.
- Find that maximum-hours laws reduced women's employment share in durable-goods manufacturing and reduced the probability that married women worked in manufacturing, with the largest negative effects observed among married women with childcare responsibilities.
- Provide, to my knowledge, the first causal evidence isolating women-specific weight-lifting restrictions. Results show lower female representation in foundry occupations and male-dominated manufacturing industries.

Policy implication: worker protection can unintentionally restrict economic opportunity when rules regulate workers by sex rather than workplace hazards or individual

capacity. My findings support attention to distributional employment effects alongside safety outcomes.

2. **Industrial Capital Intensity and the Persistence of Female Labor-Force Participation**

- Integrate historical census data, survey data, and county industrial structure to study whether production technology generates persistent geographic differences in women's labor-force participation.
- Estimate spatial-lag, spatial-error, and combined spatial models to account for dependence and spillovers across neighboring labor markets.
- Find that historically more capital-intensive local economies had lower female labor-force participation and that these differences persisted into 2013–2017.

Contribution: identifies industrial structure, technology, and local labor demand as potential mechanisms behind persistent gender gaps in employment and the spatial distribution of economic opportunity.

3. **The Impact of Federal Anti-discrimination Law on Female Employment**

- Use decennial census data from 1940–2000 to examine whether women's manufacturing employment changed differently after the passage of federal anti-discrimination law.
- Estimate state and year fixed-effects specifications across occupational representation, manufacturing employment shares, non-durable manufacturing, and male-intensive industries; extend identification through pre-trend, event-study, robustness, and exposure analyses.
- Document post-law increases in women's manufacturing employment across state groups.

Contribution: connects sex-specific protective regulation to the later transition toward gender-neutral antidiscrimination, showing how prior institutions may condition women's access to productive employment.

Africa-Facing Research Agenda

Household Energy, Health & Women's Employment in Sub-Saharan Africa

- Developing empirical research on how biomass versus clean cooking fuels affect women's reproductive health, time constraints, and paid employment.
- Planned identification explores geographic variation in electrification, clean-fuel access, prices, and distribution infrastructure to separate fuel-choice correlations from causal effects.

The Impact of Remittance Receipts on Employment Outcomes in Ghana

- Estimate the differential impact of foreign and domestic remittances on employment outcomes in Ghana.
- Explore three employment outcomes: Wage employment, Self-employment and Unemployment.

Publication:

Remittance Use and Wellbeing: Evidence from Ghana's Experience.
I find that remittance allocations to housing, business, health, and selected other uses are associated with better consumption welfare than daily-consumption use, while several productive uses are associated with lower poverty probabilities.

Research Experience

Department of Economics, **Clark University** Aug 2022 - July 2024

Research Assistant

Works Assisted In:

Compulsory Schooling Laws in Sub-Saharan Africa.
How Drinking During Pregnancy Affects Child Outcomes in South Africa.
Chagas Disease: Mortality by Cardiovascular Causes.
Factors that Determine Pollinator Habitat Installation on Farms: Evidence from Cucurbit Growers in the United States.
The Potential Economic Benefits of Enhanced Fish Passage on the Blackstone River.

Experiences Garnered

- Build reproducible research workflows using quantitative analysis tools to clean, harmonize, merge, and document large census, household, geographic, legal, and policy datasets spanning multiple decades; reconcile changing classifications and geographic units for longitudinal analysis.
- Translate legal and institutional records into structured policy variables and treatment timing; convert industrial composition and production technology into quantitative measures of local capital intensity, labor demand, and exposure to changing production environments
- Design and execute causal, longitudinal, and spatial analyses using high-dimensional fixed effects, modern staggered difference-in-differences, dynamic and cohort-specific treatment effects, treatment-effect heterogeneity, and spatial lag and error models.
- Convert empirical findings into policy-relevant interpretation by connecting estimated effects to labor-market mechanisms, worker protection, discrimination, industrial structure, technology, and women's access to employment; communicate results in research papers, presentations, and collaborative discussions.

Software Skills

Stata, R, MATLAB, GeoDa, E-Views

Teaching Experience

Department of Economics, **Clark University**

Teaching Assistant

ECON205 Microeconomic Theory	Fall 2023
ECON204 Microeconomic Theory with Calculus	Spring 2024
ECON011 Principles of Economics	Fall 2024
ECON010 Economics and the World Economy	Spring 2025 to Fall 2026

Department of Economics, **University of Ghana**

Teaching Assistant

ECON101 Introduction to Economics	Fall 2019

Teaching, Mentorship, and Collaboration

- Selected in two consecutive academic years (2025/2026 & 2026/2027) to serve on Clark University's Teaching Assistant (TA) orientation panels, mentoring incoming TAs and sharing effective approaches to student engagement, communication, assessment, inclusive instruction, and academic support.
- Translate complex economic and quantitative concepts into accessible, applied guidance, contributing to student learning outcomes reflected in top evaluation ratings of 4.9/5 for preparation, effective examples, commitment to helping students, and fair and accurate grading, and 4.7/5 for overall teaching effectiveness.
- Coach students through the research process, from formulating researchable economic questions and selecting quantitative approaches to conducting analysis, interpreting results, and presenting findings.

Professional Experience

National Health Insurance Claims Officer, Achimota Hospital, Accra , Ghana, 2016–2017

- Evaluated, coded, priced, classified, and monetized monthly health-insurance claims, strengthening accuracy, data handling, and administrative problem-solving in a public-service setting.

Research Development Intern, Cocoa Processing Company Ltd., Tema, Ghana, 2015

- Collected production and downtime data across confectionery and cocoa-processing operations; prepared daily production, plant-utilization, and downtime reports and analyzed performance trends for operational planning.

Volunteerism

Secretary, Warming Homeless Hearts Inc. https://warminghomelesshearts.org

Team Member, Day of Hope for Worcester, Department of Groceries, Clothing, and Toiletries, Vox Church, July 2023.

Research Assistant, University of Ghana Business School, Legon-Accra, 2020.

Fellow

International Development Economics Association (IDEA), member

American Economic Association (AEA), member

Scholarships & Awards

Erasmus+ Scholarship, August 2018 - January 2019

Outstanding MPhil Student, Department of Economics, University of Ghana, 2018

Clark University Full Tuition Scholarship, August 2021 to Present
